#### Meeting about Meetings\OGF

Project	DFDL 1.0
Meeting Date	21-Mar-12 (Wed)
Meeting Time	16:00 - 17:00

Created by Steve Hanson on 09-Mar-11 Last Modified by Steve Hanson on 22-Mar-12

#### OGF DFDL Working Group Call , 21 March 2012

#### Agenda

Prepare for your meeting by describing the objectives (both immediate and long-term, if appropriate) of the meeting; and describe key details.

#### 1. Daffodil Open Source Project

Status update.

#### 2. Document information item [schema] member.

The spec says this is "A reference to a DFDL schema associated with this information set, if any". If multiple schemas are involved, is this the schema that contains the root element or the schema that was passed to the parser, as these could be different (eg, schema A imports schema B which contains the root)? Two proposals emerged before we ran out of time last week:

- Retain the member but say its use is reserved for the future

- Retain the member and say its use is implementation defined

These were considered to be preferable to dropping the member altogether.

#### 3. Errata 3.14 revisited.

Continuing action 140 work has led to another review of the enum names for separatorSuppressionPolicy. The problem with the enums stated in errata 3.14 is the use of the word 'empty', which is a term specific to the content region. But suppression is about suppressing adjacent separators, so the correct terminology is 'zero-length representation'. Proposal is to make the enums simple and explain the conditions for suppression in the property description. Proposed enums:

- 'never'
- 'anywhere'
- 'trailing'
- 'trailingStrict'

#### 4. Clarify rules when it is allowed to specify prefixIncludesPrefixLength = "yes"

See e-mail. The spec does not state the allowable situations, and it needs to to avoid situations such as length units differences between the element and its prefix.

#### 5. Expressions in escape scheme properties

The spec allows the escapeCharacter and escapeEscapeCharacter of DFDL escapeScheme to be expressions, in case the characters are supplied dynamically in the data stream. However given that escape schemes are defined globally, should these properties be permitted to take relative paths in the expression? Today the spec implicitly allows this, meaning an implementation can not entirely validate an escapeScheme annotation up front, but must validate escapeCharacter and escapeEscapeCharacter at each point of use. I'm not sure it makes much sense for the path to be anything than absolute.

**IBM TeamRo** 

6. AOB

Minutes

#### **Meeting Minutes**

Reflect on your meeting as you record all topics and issues discussed, and any tabled conversations. What went well, or what would you do differently next time? Document those so others can take advantage of your learning.

#### Attendees

Steve Hanson (IBM) Steph Fetzer (IBM) Mike Beckerle Tim Kimber (IBM) Alonza Mumford (US NRL)

#### Apologies

Suman Kalia (IBM)

#### Minutes

#### 1. Daffodil Open Source Project

Continuing to make progress.

Steve & Mike are presenting at US NSA conference in Baltimore at end April. Day 2 of conference: 45 mins intro to DFDL and implementations. Steve to send OGF34 slides to Alonza. Day 3 of conference: 2 hour tutorial. Alonza to make a site visit this week to see if attendees can bring their laptops and actively participate in the tutorial.

Alonza looking at modeling JPEG 2000 format as a test for IBM DFDL parser.

#### 2. Document information item [schema] member.

Decision: Retain the member but say its use is reserved for the future. Errata taken.

#### 3. Errata 3.14 revisited

Not discussed

#### 4. Clarify rules when it is allowed to specify prefixIncludesPrefixLength = "yes"

Decision: If prefixIncludesPrefixLength = "yes" then: if the prefix type is lengthKind 'implicit' or 'explicit' then the lengthUnits of both the prefix type and the element with lengthKind 'prefixed' must be the same, and if the prefixType is lengthKind 'pattern' then the lengthUnits of the element with lengthKind 'prefixed' must be 'characters'. Errata taken.

#### 5. Expressions in escape scheme properties Not discussed

#### Meeting closed 17:00 UK

Next call Tues 27th Mar 2012 @ 15:00 UK

#### Create Action Items

Record the to-do's and individuals assigned by entering the appropriate information in the form below. Press the "Create Action Items" button to create specific to do's that can be tracked in the assignee's Work for Me views. " All Action Items will be tracked in the Action Items and Other Meeting Documents tab.

#### Action Items and Other Meeting Documents

## Actions raised at this meeting

No	Action

### **Current Actions :**

No	Action
123	<ul> <li>DFDL tutorial (Steve)</li> <li>13/10: Draft of first 3 chapters has been written and will be distributed to WG</li> <li>10/11: Posted to grid forge here (http://forge.gridforum.org/sf/go/doc16106?nav=1), work continuing at IBM to define a standard example-based chapter framework and to author additional chapters. Contributors welcome!</li> <li>17/11: Steve, Stephanie and Alan had a meeting to discuss the best structure for the tutorial and decide which examples to use throughout. The meeting raised more questions. Further discussions will be held.</li> <li>24:11: The list of topics to be covered in the remaining lessons has been produced and a lesson template. Alan will write lesson 4</li> <li>01/12: Alan has started lesson 4 which covers fixed and variable fields and arrays.</li> <li>08/12: Alan has almost completed lesson 4. Will send out for review.</li> <li>15/12: First draft of lesson 4 is available for review. Alan to send to Bob and Joe.</li> <li>22/12: Alan has distributed drafts for tutorials on Basic Structure and Optional/Repeating elements. Please review</li> <li>12/01: Alan distributed a tutorial for choices and updated the others. Alan and Steve reviewed them and updated versions will be sent soon. Should start on the 'representation' tutorials soon.</li> <li>19/01: The tutorials for basic structure, optional/arrays and choices have be updated.</li> <li>Please review. The tutorial for text elements should be available soon.</li> <li>26/01: No comments received about 3 tuorials distributed last week. Alan is still working on Text representation.</li> </ul>

	02/02: Steve has sent comments on three tutorials. Alan to send updated versions by the end of the week. Alan has also distributed the first part of the tutorial on text representation and would like feedback.
	09/02: Steve had reviewed tutorials 3,4,5 and updated versions have been distributed. Joe reviewed lesson on text elements.
	Main points. Using 'represented as text' is confusing. Examples are too cluttered. Suggest simple targeted examples but still build up to final complete schema 23/02: New versions distributed and Steve has commented. 02/03: Alan has published the final versions of tutorials 4,5,6 and is working on text respresentations. There was some discussion about the detail that needs to be covered.
	Should limit it to 'common usage' and refer to the spec for details of edge cases. 09/03: Alan distributed an update to the text tutorial. Please review. 30/03: Steve has spent half a day tidying up lessons 1 to 6 and has uploaded them as pdfs to gridforge. They are now more coherent, and many inconsistencies and errors fixed. Ownership of draft lessons (text properties, binary properties, advanced features) has been passed to Steve. Also need to make a schema available for the examples. 13/04: Steve is working on the text properties tutorial.
	04/05: No progress 18/05: No progress 01/06: No progress
	08/06: No progress 15/06: This is on hold until Steve clears up spec issues and other workload. Steph has looked at the later lessons, and noted that they are more direct compared to the more wordy earlier lessons. 28/06: On hold.
	 29/11: Tim offered to take a look at the next outstanding tutorials. Steve / Tim to discuss 6/12: No progress
	 10/01: No progress, offer from Mike to help. First step is to make any corrections due to errata. 17/01: No progress
	24/01: No update 31/01: Daffodil project team will be working their way through the existing tutorials and reviewing
	14/02: Daffodil team to start reviewing tutorials hopefully this Friday. 21/02: Moved to this coming Friday 28/02: No update
	13/03: No progress 21/03: No progress from Daffodil team. IBMers are starting to use the tutorial and will feedback any comments.
140	Spec issue: Parsing: 'missing' v 'empty', role of initiators , default values (All)
	01/06: See minutes. 08/06: Still under discussion. Tim has sent Mike a selection of data formats to guide the discussion.
	15/06: Not discussed - an extra call has been scheduled to go through this. 28/06: A series of extra calls are being held between Mike, Steve, Tim and Steph. 05/07: Next extra call is Wed 6th July - Steve to send invite
	12/07: Two more calls held. Next call is Wed 13th July. 19/07: More calls held, next call is Fri 22nd July. 26/07: More calls held, good progress
	16/08: Steve will set up next call for when Tim has returned from holiday 23/08: Two more calls scheduled for this week, remaining issues: separator suppression, empty strings, sparse arrays (see action 136)
	30/08: Call held earlier today. Still remaining - separator suppression (matrix); sparse arrays; empty strings; empty value delimiter policy. Steve to summarise where we have got so far before remaining items are tackled.
	20/09: Steve has summarised where we are with action 140, which Tim and Mike have reviewed. 2 hours call planned for Thursday. 27/09: Calls held, progressing the separator suppression behaviour
	4/10: More calls held, progressing separator suppression, sparse arrays (see action 136)

	and emptyValueDelimiterPolicy behaviour			
	18/10: All issues now in a single document, call held earlier today. Next call Thursday.			
	1/11: Extra calls still ongoing			
	8/11: Extra calls still going, when action 140 document complete will send to Steph for			
	review			
	15/11: Mike is verifying the action 140 conclusions by writing an algorithm in SCALA which			
	can be ultimately be used in Daffodil			
	22/11: Call to be held next week			
	29/11: Next call 30/11			
	6/12: Next call 7/12			
	13/12: Had call earlier today, making good progress. Next call first week of Jan.			
	10/01: Next call to be scheduled for Wed or Fri			
	17/01: No call last week, call tomorrow			
	24/01: Two calls held, next call Wed, looking at separator suppression			
	31/01: Separator suppression discussions ongoing, proposal to rename policy and enums.			
	Call later this week.			
	14/02: Now looking at separator suppression and unparsing. Next call on Friday			
	21/02: Separator suppression on parsing/unparsing matrix agreed.			
	28/02: Two more calls this week			
	13/03: Call tomorrow			
	21/03: Two more calls held			
145	Provide a 'dispatch' way of discriminating a choice for better performance of the			
	envelope/payload use case (Steve, Mike, Suman)			
	12/7: See minutes. Need to choose a proposal and flesh out.			
	19/07: Waiting for proposals			
	26/07: Waiting for proposals			
	16/08: Waiting for proposals. Suman added to action.			
	1/11: Steve to send a proposal			
	21/03: Steve has sent a proposal. Mike has sent a counter proposal. Steve to respond.			
146	Model NRL's bit-oriented format where complex repeating element carries a 'last'			
146				
146	indicator (Steve, Mike)			
146				
146	indicator (Steve, Mike) 19/07: NRL to send xsd and example of format.

159	Property documentFinalTerminatorCanBeMissing not flexible enough ? (Steve) 10/01: Do we need to upgrade this property to handle formats where the terminator is not allowed on output but tolerated on input?				
	 21/03: With Steve to investigate further				
161 Fold errata into DFDL spec (Mike/Steve) 17/01: Start with Steve updating spec to include his marked up changes					
	14/02: Steve has published errata document v8 which includes all resolved errata up until today, but has not yet started to fold into spec. 21/02: No progress but Steve will start this week				
	28/02: Steve has started on this. Editorial corrections made. Going through spec and flagging (using Word comments) where errata affect the spec (up to 2.16 so far). If the errata is simple then he is fixing the spec at the same time. The outcome of this first pass will be a spec in which a reader can see which sections are affected by errata. Then the second pass is to fold in the rest of the errata.				
	13/03: Steve has completed first pass and sent spec to Mike. Mike has made his editorial changes and is applying errata. Steve to check formatting not scuppered by Mike's editor. 21/03: Converted spec to docx format as this works better with Mike's editor, though Mike will switch to using Word for consistency. Mike folding in errata this week. Errata doc is due an update but that is on hold until Mike has finished, as each errata will be				
	tagged as folded in or not.				
167	Establish SWIFT etc use of variable length numbers with virtual decimal points (Steve) 21/2: Then we can decide what to do with patterns that contain #, V, P 28/02: Steve has chatted to Steph who considers it likely that people do this, though not seen it in a current industry standard. Note this is supported by IBM WTX and IBM MRM. 13/03: Conclusion is that DFDL will allow # & V/P in the same pattern but specify the allowable combinations. Steve to send proposal e-mail. Mike also raised the issue of V/P used in a pattern for a logical xs:float or xs:double. Favoured approach is to disallow. Mike to send proposal. 21/03: Steve & Mike have sent proposals. Steve to check COBOL spec one more time to				
	make sure interpretation of V and P semantic and usage is correct.				

## **Closed actions**

No	Action

## **Deferred** actions

No	Action				
129	Press release to publicise DFDL (Steve)				
	teve is pulling together a press release at IBM. Want to include as many contributors and neterested parties as possible.NCSA are keen to be included. Also likely that US National archive will want to be included. Mike has indicated OCO are too. 7/11: no progress				
	 08/12: Still no response from IBM press office 15/12: no progress				
	09/03: No progress				
	30/03: Making this action deferred until IBM is in a position to say something more concrete about any implementation.				
131	Transformation of DFDL properties to a canonical form (Joe)				
	08/12: Joe has produced a XSLT to transform a DFDL schema to a canonical element form. When tested it should be made available on the WG gidforge site.				
	15/12: Alan tested against test dfdl schema which worked correctly (after fixing some error in the schema)				
	22/12: no update				
	12/01: Joe has some defects to fix before making available on gridforge.				

1	19/01: There is a difficult problem to solve before Joe make the style sheet public				
	26/01: Working on problems 02/02: no progress				
	09/02: As it wasn't a simple as exoected this will be treated as a low priority action				
	23/02: Low prioity 09/03: Low priority				
	30/03: Deferring for now				
066	Investigate format for defining test cases (AII) 25/11:IBM to see if it is possible to publish its test case format.				
	04/12: no update				
	 17/02: IBM is willing in principle to publish the test case format and some of the test cases.				
	May need some time to build a 'compliance suite'				
	24/03: No progress				
	03/03: Discussions have been taking place on the subset of tests that will be provided 10/03: work is progressing				
	17/03: work is progressing				
31/03: work is progressing 14/04: And XML test case format has been defined and is being tested.					
	21/04. Schema for TDML defined. Need to define how this and the test cases will be made				
	public 05/05: Work still progressing				
	12/05: Work still progressing				
	02/06: Work still progressing on technical and legal considerations				
	25/08: Will chase to allow Daffodil access to test cases. The WG should define how				
	implementation confirm that they 'conform to DFDL v1' 01/09: IBM still progressing the legal aspect. Intends to publish 100 or so tests as soon as it				
	can, ahead of a full compliance suite.				
	08/09: IBM still progressing 15/09: IBM still progressing, expect tests to be available within a few weeks				
	22/09: IBM still progressing, expect tests to be available within a few weeks				
	29/09:Test cases are being prepared. 06/10: Some test cases should be available next week. Steve would like to be able to show				
	the test case information at OGF 30.				
	13/10: Still progressing 10/11: Legal issues cleared, IBM in process of collecting 100 example test cases, ideally				
	ones that fit the 'extended conformance' of NCSA Daffodil				
	17/11: Work is progressing on verifying the test cases. It should be possible to distribute to the WG in 2 weeks.				
	24/11: About half the test cases have been completed and are being reviewed internally.				
	01/12: Test cases should be available shortly				
	08/12: The test cases are in internal IBM review. Probably need a bit of reorganising before publication				
	Stephanie gave a brief overview of the format of the test cases.				
	15/12: Ruth joined the call to provide the latest status. The test cases have been updated and a draft read.me produced. Although not ready for public distribution Ruth will send them				
	to Joe for feedback.				
	22/12: Test cases were sent to Joe for initial testing which found some problems in the Daffodil parser				
	12/01: All current tests use a default format whih Daffodil doesn't currently support. Joe				
	suggested that there should be test that defined the same function using different definition forms. Also suggested that default formats should be provided by the WG. This had always				
	been the intention. Action 133 raised to track.				
	19/01: There is currently no resource available in IBM to make more tests available. IBM to discuss how/if it can make a 'minimal compliance test suite' available.				
	26/01: Action kicked off within IBM. There was a brief discussion abot naming and				
	organisation of test cases but no preferences were expressed				
	02/02: IBM will not have the resources to develop a full test suite in the near future. Steve suggested that we produce a list of required test cases so that anyone could supply them.				
	09/02: Steve had previously sent a list of areas to be tested. Please review.				

23/02: Please review Steve's list of areas to be tested
02/03: Alan had reviewed Steve's list and we went through his comments. Agreed there is no need for separate tests for the infoset or for dfdl: property lists, unions etc but comment will be added that these should be exercised during property testing.
09/03: Alan updated the test document. Need more introduction and perhaps adopting the OGF template.
30/03. Ownership of test document passed to Steve. This action is merged with 112 and will cover all aspects of compliance suite.
13/04: IBM will not have time to create a compliance suite in the near future. Probably best to make this action deferred for now.

#### Work items:

	No	Item	Owner	Target	Status
Γ		Track errata list for 1.0 of the spec.	Steve	N/A	Draft 0007 on
		http://forge.gridforum.org/sf/go/doc16280?nav=1			grid forge.
	044	Incorporate errata list into DFDL spec.	Steve/Mike	TBD
