

This is an informal collection of ERRATA to GFD.90, SAGA Core 1.0.
A more formal errata document will be published once sufficient experience
will be available. Meanwhile, we collect appearing items here.

=====

2008-01-24:

page 247
package saga.file
class iovec:

set_offset method also throws BadParameter when "out of bounds":
size >= 0 && len_in + offset > size

set_len_in method also throws BadParameter when "out of bounds":
size >= 0 && len_in + offset > size

page 254
package saga.file
class file:

read_v method also throws BadParameter when "out of bounds":
when no len_in is specified, the buffer size is used instead as len_in.
If, in this case, offset > 0 a BadParameter exception is thrown.

page 255
package saga.file
class file:

write_v method also throws BadParameter when "out of bounds":
when no len_in is specified, the buffer size is used instead as len_in.
If, in this case, offset > 0 a BadParameter exception is thrown.

=====

2008-01-24:

page 246
package saga.file
class iovec:

The iovec constructor can also throw NotImplemented,
as its base buffer can, and as all constructors should be able to.
