# Grid Network Infrastructure

David E. Martin

Program Director, Internet Standards and Technology, IBM Systems Group

martinde@us.ibm.com
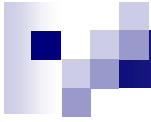

Two Network Models

- **Black Box**
  - Can Only Probe from the Outside
  - No Control or Requests
  - Unexpected Changes May Occur at Any Time
- **Managed Network**
  - Network Will Report It's State
  - Changed Bandwidth/Topology on Request
  - Notification of Schedules and Changes

Network Control

Should we address network control?

- ## Quality of Service
  - RSVP, Diffserv, Packet Shaping, MPLS

- ## Bandwidth Management
  - Link Establishment
  - Scheduling
  - Dynamic Bandwidth Allocation
  - Firewall Control
