## DFDL WG Call Agenda

This OPEN document will not be filed. It is being kept active.

## Meeting about MeetingsIOGF

Project DFDL 1.0
Meeting Date 14-Nov-19 (Thurs)
Meeting Time 16:00-17:00
Created by Steve Hanson on 09-Mar-11
Last Modified by Steve Hanson on 27-Nov-19

## OGF DFDL Working Group Call, 28th November 2019

## Agenda

Prepare for your meeting by describing the objectives (both immediate and long-term, if appropriate) of the meeting; and planning details.

## 1. Daffodil Open Source Project

Status update

## 2. AOB

## Minutes

## Meeting Minutes

Reflect on your meeting as you record all topics and issues discussed, and any tabled conversations. What went well, or what would you do differently next time? Document those so others can take advantage of your learning.

## Attendees

## Apologies

Bradd Kadlecik

## Minutes

## IPR Statement

"I acknowledge that participation in this meeting is subject to the OGF Intellectual Property Policy."

## Meeting closed

## Next regular call

12th December 2019 @ 16:00 UK

## Create Action Items

Record the to-do's and individuals assigned by entering the appropriate information in the form below. Press the
"Create Action Items" button to create specific to do's that can be tracked in the assignee's Work for Me views. " All Action Items will be tracked in the Action Items and Other Meeting Documents tab.

Action Items and Other Meeting Documents

Next action: 316

## Actions raised at this meeting

| No | Action |
| :---: | :--- |
|  |  |
|  |  |

## Current Actions:

| No | Action |
| :---: | :--- |
| $\mathbf{2 5 0}$ | Standardise on a single tdml format for DFDL tests (AII) <br> 5/2/14: Steve has requested permission for IBM to view / use the Daffodil tdmI <br> files, as a precursor to trying to standardise on a common tdml format. Was <br> formerly part of action 066. |
| $\ldots$ | 18/2: No further progress <br> 11/3: Mike and Steve discussing the best way to share and cooperate on tdmI <br> format. <br> 25/3: Discussed the creation of an OGF document that will own and define a <br> standardised tdml format. <br> 11/4: Proposal is for the OGF document to define a tdml format without Tresys or <br> IBM copyright statement. |
|  |  |

6/5: No further progress
20/5: Mark has read through the document. Particularly concerned with how namespaces are handled in the infoset.
$\ldots$
17/6: No further progress
25/6: Mike has added bit order capability as per action 233.
9/12: No further progress
6/1/15: Mike to resurrect this as Tresys would like to run their tdml suite against both Daffodil and IBM DFDL.
...
10/2: No further progress
24/2: Mike updating the Daffodil TDML test runner to handle unparser (ie, serializer) tests

14/4: No further progress
28/4: Tresys have enhanced their tdml runner to allow unparser tests and round-trip tests (parser->unparser->parser) as well as the new tutorial tag (see action 228)
12/5: Not discussed
...
3/11: No progress
5/1/16: No progress. Needs more interoperability between implementations to be really useful.

25/7/17: No further progress
3/10: No further progress although forthcoming work to add packed/zoned numbers may force https://redmine.ogf.org/issues/339 progress

11/12: Expected to look at this in the next month or so ...
4/9/18: No further progress
16/10: Mike has started work on a TDML runner that can drive a pluggable DFDL implementation, in support of interoperability testing, including IBM DFDL.
1/11: Pluggable TDML runner working. On Github at
https://github.com/OpenDFDL/ibmDFDLCrossTester. Schema resolution for IBM
DFDL achieved using its schema resolver feature and pointing it at Daffodil's resolver. IBM DFDL sample uses mark() on its input stream but IBM believes this is not necessary.
15/11: IBM DFDL and Daffodil have dependencies on different releases of ICU. Forcing changes to the TDML runner to isolate the implementations under test.
29/11: Good progress on the TDML runner, see email from Mike. The
ibmCrossTestRig is not part of Daffodil (because it links against IBM DFDL), but is open source Apache License v2, and is currently in review at
https://github.com/OpenDFDL/ibmDFDLCrossTester/pul//1. Steve needs to talk to IBM legal to check this is ok as it currently modifies IBM DFDL sample code. 10/1/19: Daffodil have removed the modified IBM DFDL sample code. Steve to ask whether IBM can donate tests from the existing IBM DFDL test suite.
7/2: If permitted, the tests from IBM can be used to see how the IBM and Daffodil tdmls have diverged.
5/4: IBM are permitted to send Daffodil some example tdmls. Steve to send some to Mike for next call.

31/5: No progress
27/6: Steve has sent example TDML files to Mike, under the existing IBM Grant of

|  | Copyright agreement with Apache. <br> 11/7: Daffodil to adapt their test runner so that it works with the IBM TDML file variant. Action can be closed when this is done. <br> 29/8: No further progress <br> 17/10: Noted that this action had its number accidentally swapped with 242 in October 2016. Renumbered back to 250. 28/11: |
| :---: | :---: |
| 279 | Improve defaulting description to explicitly cover local groups (Mike) <br> 28/4/15: Only talks about elements, should mention local sequence and choice. <br> 12/5: Not discussed <br> 23/6: Section 15.1.3 needs to say what happens when a choice branch does not contain any elements; such a choice branch is selected (but see action 280 below as minOccurs '0' might change this). Section 9.4 also needs updating to say what happens when local groups are found within a complex type. <br> 11/8: Steve did some tests with IBM DFDL. Just need some words as above. <br> Action assigned to Mike. <br> 25/8: In progress <br> 5/1/16: No progress <br> 17/10/19: No further progress <br> 28/11: |
| 289 | Unparsing: expression refers backwards to outputValueCalc which refers beyond it. <br> 2/8/16: Need to decide if this is allowed and if so if there are any restrictions. 13/9: Motivating scenario is where a variable is being set to a length element using dfdl:setVariable, which on unparse is set using dfdl:outputValueCalc. So although the variable is referring backwards to the length element, it is effectively forward referencing so must block. Mike believes this is unavoidable. <br> 11/10: Daffodil has implemented this, Mike to provide scenario. <br> 8/11: Mike couldn't find example, will continue to look <br> 10/1/17: Mike has realised that all the examples were reworked to avoid using variables, hence why can't be found. <br> 7/2: Daffodil will soon be implementing dfdl:newVariableInstance which will bring this up again. <br> 17/4/18: Waiting for Daffodil to implement dfdl:newVariableInstance <br> 15/5: Daffodil team have supplied an example of this from the PCAP schema. <br> Likely to require a flag on newVariableInstance (or maybe variable declaration) to indicate whether needed on parse, unparse or both. <br> 17/10/19: No further progress <br> 28/11: |
| 293 | Investigate solutions to enabling choices in hidden groups to be unparsed (AII) <br> 7/2/17: Study of problem needed in order to best evaluate any proposals. <br> 21/2: Mike has circulated a proposal internally within Daffodil. <br> 4/4: No progress but immediate need has gone away. On hold for now. <br> 17/4/18: On hold. <br> 15/5: Daffodil now looking at this and will write up a proposal. Potential commonality with action 289. <br> 17/10/19: No further progress <br> 28/11: |

Confirm IBM DFDL behaviour when parsing empty strings (Steve)
7/8: IBM DFDL has not fully implemented the behaviour changes arising from action 140 with respect to empty string elements. Daffodil is about to do so. IBM DFDL users have complained about lack of defaults when parsing but other than that appear happy. Are the rules in the spec for empty strings over complicated? Steve to document the behaviour for IBM DFDL to inform the discussion.

1/11: In progress - there are a lot of subtle scenarios
15/11: Not discussed
7/2/19: No further progress
5/4: Steve has documented IBM DFDL behaviour and summarised options. The problem is that IBM DFDL does not handle empty strings correctly when parsing; it errors if required, and throws away if optional (regardless of markup). Mike to test Daffodil (but the only non-compliance is likely to be that a default value is not used if present and required string is empty). Discussed a proposal for a new property that caused Daffodil to implement the IBM rules. More thought needed. 2/5: Mike sent proposal for new enum property dfdl:emptyElementPolicy with values 'noOptionalEmptyElements' (matches current IBM DFDL behaviour) and 'optionaIEmptyElementsWithSyntax' (matches DFDL 1.0 spec and Daffodil behaviour). Review for next call.
31/5: Email discussion on the name and enums for the property. Steve proposed dfdl:emptyElementParsePolicy = 'treatAsMissing' | 'treatAsEmpty'. Daffodil has implemented this and it has shown it to work. For positional occurrences where order needs preserving, also need to use nillable='true' and dfdl:nilValue='\%ES;'. This shows up a potential flaw in the name, as ES nil processing must take place before the property is applied. Steve has one remaining concern around IBM DFDL's behaviour, and that is whether its dfdl:nilValue='\%ES;' behaviour might be taking precedence over 'missing', and needs to investigate further.
27/6: Email sent by Steve. dfdl:nilValue='\%ES;' is the 1st zero-length rep check, so IBM DFDL is correct. 2nd check is empty rep check. 3rd check is normal rep an edge case around EVDP. Failing that it's the absent rep. IBM DFDL does not add anything to infoset for 2 or 3 . The currently proposed property name dfdl:emptyElementParsePolicy is therefore not $100 \%$ accurate, needs some more thought.
11/7: Daffodil has implemented dfdlx:emptyElementParsePolicy in the experimental namespace and has shown that the IBM DFDL schemas for TLog can be parsed successfully using 'treatAsMissing', thereby demonstrating interoperability. Because it is key to interoperability, it should go into DFDL 1.0, and IBM DFDL needs to at least recognise the property and give an error if 'treatAsEmpty' used. Need to agree on any naming refinements, eg, use 'treatAsAbsent' instead of 'treatAsMissing'.
8/8: Added to experimental features table. New tracker
https://redmine.ogf.org/issues/355. Keeping action open as there will be an erratum on DFDL 1.0. Likely outcome is that 'treatAsEmpty' is an optional feature, as not implemented by IBM.
29/8: Not closing until erratum written up.
17/10: Experience document 7 created by Mike to describe this (
https://redmine.ogf.org/dmsf_files/13596?download=), plus proposed erratum wording. Steve reviewed the document and had several comments. Mike has revised the document. Steve will re-review the document and review the erratum wording.
28/11: Steve is happy with revised document. Needs erratum creating.
Create example scenarios to illustrate offset \& pointer requirements (Bradd)
5/4/19: Daffodil have a draft proposal for offset support, TPF have experimental

|  | comments with further changes, ready for another review cycle. One erratum requiring more thought is 5.39 (issue 299) as it introduces the new concept of a choice branch with zero occurrences. <br> 28/11: Steve has reviewed latest errata, no changes required. Note 5.39 is correct as written, no more discussion needed. Mike has incorporated the errata into the DFDL spec at https://1drv.ms/w/s!Aq-m71woTg zixt8M9fKzm9iH1mi?e=LLXJps. Changes need reviewing please. |
| :---: | :---: |
| 313 | Investigate dfdl:textNumberCheckPolicy='lax' and plus sign behaviour (All) 29/8/19: IBM DFDL and Daffodil look like they behave differently. Spec suggests IBM DFDL is correct. Yet both use ICU under the covers! More investigation needed. <br> 17/10: Looks like ICU changed behaviour in a recent release, thought to be 61 around Dec 2017. Daffodil is picking up a later release. IBM DFDL is back on 51.2. We can't have this moving around, so the spec needs to pin down the ICU release(s) that are eligible for implementations to use. Daffodil will change to pick up an earlier release. Potential issue going forward if we have to move to a later ICU for security or bug-fix reasons. Steve to raise a ticket against ICU to (provide an option to) revert the behaviour. <br> 28/11: ICU issue raised - https://unicode-org.atlassian.net/browse/ICU-20896, no response as yet. We talked about pinning DFDL 1.0 to an earlier release of ICU, however IBM DFDL had an ICU bug fixed in release 62 to do with lenient number parsing differences between C and Java. |
| 314 | Clarify behaviour of documentFinalTerminatorCanBeMissing="yes" (All) 17/10/19: This property states that is not an error if there is no terminator found, but does not state what the effect is on emptyValueDelimiterPolicy and nilValueDelimiterPolicy. Should the terminator be considered to be logically present? <br> 28/11: Steve believes it shoiuld, and would like the following or similar added at the end of the first paragraph in the property description "If not found, the terminator is considered to be logically present for the purposes of establishing representation." |
| 315 | Determine the behaviour of fn:count(.) and fn:exists(.) (All) <br> 17/10/19: Not clear from the spec. Need to consider existing concept of 'knownToExist' and the existing rules about when expressions are evaluated. 28/11: |
