## **Policy Management Authority Model Charter**

### **Status of this Memo**

This memo provides information to the Grid community on constructing a charter for a Policy Management Authority. It does not define any standards or technical recommendations. Distribution is unlimited.

### **Copyright Notice**

Copyright © Global Grid Forum (2003). All Rights Reserved.

### **Abstract**

This document provides a template that can be use to develop a charter for a Grid Policy Management Authority [GPMA] The GPMA is responsible for the management of a “Grid Public Key Infrastructure” [GPKI] and its associated “Grid Certificate Authorities” [GCA]. GPMAs will serve as the points of contact for GPKIs that wish to interoperate. A GPMA is responsible for managing external relationships and any resulting internal changes.

## 1 Introduction

This is a template for a charter for a Grid Policy Management Authority [GPMA]. A GPMA is responsible for the management of a “Grid Public Key Infrastructure” [GPKI] and it’s associated “Grid Certificate Authorities” [GCA]. A GPKI may consist of a single CA [GCA] with one or more points of registration; a bridge between multiple root CAs; lists of acceptable CAs; or other combinations. Since the Grid consists of many different kinds of organizations working towards interoperability, it is reasonable that many GPKIs will exist.

There are already several substantial Grid collaborations that have agreed to work together to manage PKI policies in order that their members can make full use of available resources across these collaborations, and it is expected that there will be many more. These collaborations can also be expected to collaborate with each other at times. A common organizational structure and set of expectations will substantially benefit the various grids. The GPMAs will serve as points of contact for different VO’s and GPKI’s that wish to interoperate, and provide a medium for discussing and normalizing policy differences between different organizations. The GPMA will manage external relationships and resulting internal changes (or vice versa), reflecting these changes in its CP and CPS document set.

## 2 Scope

The GPMA’s primary responsibility is to manage the CP/CPS documents. This may be a single composite document; or the CP may exist as a template or specification and the CPS as a point-by-point detailed response; or these may be broken up into many separate documents.

The GPMA provides points of contact for insiders – relying parties and subscribers in its PKI. Relying parties in particular need a forum to raise issues: new applications or certificate usages, certificate roles, re-registration, security concerns, etc. The GPMA provides points of contact for external entities such as another PKI PMAs, potential new members, or relying parties. The CP/CPS should provide contact information for the GPMA managing it.

In all cases the GPMA provides access to

- GCA CP and CPS
- Other related documents (Subscriber and End-Entity agreements, auditing reports, white papers)
- Meeting schedules and minutes
- Telephone and email points of contact

## **3 Creation of PMA**

### **3.1 Initial membership**

Members of one or more virtual organizations [VOs] running CAs or in need of CA services may agree to cooperate on an interoperable PKI. These VOs appoint an interim chairman (by consensus). The initial set of members will add bylaws to the GPMA charter to manage the question of:

- Charter approval/amendment process
- Adding and removing new members
- Other issues pertaining to the management of the PKI

The initial set of members will set up a hosting organization and web site to provide access to the document set and contact information, and they will appoint a committee to draft the CP and CPS documents. All CAs providing services for the GPKI agree to comply with the terms of the CP and CPS documents and provisions of the GPMA charter.

## **4 Membership**

### **4.1 Membership Guidelines**

#### **4.1.1 New Member Organizations**

It is assumed that the GPKI will add organizations that will operate their own CAs, or their own registration and identity management infrastructures in the GPKI. New member organizations are approved by existing members of the GPMA through a process specified in the bylaws.

New member organizations must agree to abide by the GPMA charter, the CP/CPS and other documents managed by the GPMA; and they must have individuals willing to serve in the GPMA as participating members (see below).

#### **4.1.2 Type of Membership**

GPMA membership is based on constituent organizations, but is made up of named individuals from those organizations. A member organization can provide multiple members, so long as it is to the benefit of the GPMA, but number of participating members should not affect the number of votes the member organization is entitled to cast.

### **4.1.3 Participating Member Guidelines**

Participating members should be drawn from a wide range of community members. In particular, members with significant management experience, capable of acting (voting) on behalf of their organization, are desirable. The bylaws may provide for a ceremony to introduce new participating individuals.

## **4.2 Executive Council**

If the numbers of organizations or additional memberships grows substantially, it will become necessary to split the membership. The membership should select a small body to manage the GPMA.

## **4.3 Withdrawal/Expulsion**

### **4.3.1 Organizations**

Organizations may cease to exist or drastically change their management. The GPMA bylaws should allow for withdrawal or expulsion in these cases.

### **4.3.2 Individuals**

Individual participating members may change roles or may no longer be capable of performing duties on or for the PMA. Member organizations and the PMA bylaws must take these possibilities into account and provide for a means to remove individuals when necessary; allow for a resignation procedure; and a succession mechanism.

## **5 Responsibilities**

### **5.1 CP/CPS**

These complex documents require on-going revision and examination. The documents often have “bugs” – errors of fact or errors in specification – that need to be corrected.

The Grid and its software base are undergoing rapid development. The following areas may require adjustment in policies and deployment in the near future:

- CRL and certificate validation infrastructure
- Authority Information extensions
- Key sizes
- Special purpose servers and web services
- Certificate profiles and extensions

## 5.2 Other documents

The GPMA manages its own charter, and should add or change by-laws to deal with changing conditions and membership. The GPMA may manage documents such as:

- Subscriber (end-entity) and relying party agreements.
- PKI Disclosure Statements
- Operations guides – access to these may be controlled due to security considerations.
- List of participating CA's with contact data.
- Audit reports

## 5.3 Audit

The GPMA is responsible for assuring that the GCA and GPKI are operated in accordance with the CP/CPS and other operations documents. The GPMA will conduct periodic compliance audits of the GCA, its registration authority operations, and subordinate or component CA's.

The GPMA may hire auditors at various times, as required by the CP, as specified in the by-laws, or as the GPMA sees fit.

The GPMA should publish substantial portions of the audit report.

## 5.4 Operations

The constituent organizations will hire a CA operator, and may pool resources to create the GPKI. The GPMA is responsible for maintaining this relationship. The CP should constitute the substantive technical portion of the contract with the constituent organizations. The GPMA will manage the contract with the CA operator.

The GPMA is a policy management authority, not an operations unit. It does not manage day-to-day activity of members, the CA operator, or RA operators.

## 5.5 Directory

X.509 certificate services have implicit and explicit dependencies on directory (LDAP, X.500). The GPKI's relationship with directory is unclear at this time, but the GPMA will include directory management and access with GCA and GPKI operations issues. Participating directories should support the same certificate retrieval mechanisms, which are being defined in the IETF pkix WG.

## **6 Activities**

### **6.1 Point of Contact**

The GPMA creates a web site, contact forms, contact postal and email addresses, in its initiation phase. These points of contact should be open to anyone in the community; in the GPKI this is effectively the world.

### **6.2 Meetings**

The GPMA will meet periodically (as described in the by-laws). The GPMA must provide the ability for members to conference remotely, such as by telephone conference, H.323, Access Grid or equivalent.

Agendas will be posted by the chairman in advance of these meetings.

Minutes will be posted by the chairman.

### **6.3 Research**

It is expected that Grid requirements and PKI technology will change considerably in the future. The GPMA should support a research committee.

### **6.4 Decision – making process**

The GPMA needs to provide an orderly decision-making process. The GPMA will need to make decisions about amendments to the CP and related documents; to its by-laws; to its schedule; and its membership.

Questions concerning membership, meeting schedule, and by-laws are probably only open to GPMA members for introduction. It may be useful to allow the PKI community or even interested outsiders to introduce amendments to the CP/CPS and related documents.

Questions and amendments submission could be managed by mailing list (perhaps an open- and closed- mailing list to cover open and restricted questions), or by other means as described in the by-laws. The GPMA should set aside a review period for all items under consideration, to allow all parties time to understand the issues.

The GPMA will establish a decision-making system. Consensus works best in some situations and is probably the best way of ensuring trust, but may not scale to a large organization with many members. A majority-vote system has many benefits. The GPMA may choose to establish some other system in its by-laws.

In some cases conflicts may arise that cannot be settled internally. If the GPMA is affiliated with a larger organization, then the by-laws should establish an appeal process.

## 7 Bylaws

The GPMA may wish to note specific changes to PMA policies listed elsewhere in this document, by referring to section number and listing the change. Bylaws take precedence over other sections of this document.

## 8 Security

The GPMA has no security issues of its own. Operations guides may need to be limited to a select audience. Audit reports may need to be kept confidential. Both reveal the details of internal operations, and have the potential to identify significant weaknesses. On the other hand, the more open the process is, the

## 9 Examples

### 9.1 ESnet – DOE Grids PKI

<http://www.doegrids.org>

GPMA page: <http://www.doegrids.org/pages/doesgpma.htm>

This GPMA is made up of several constituent organizations, and is operated by ESnet. The GPMA charter document is still being developed. Its current practices influenced this GPMA document.

### 9.2 EDG WP-6 CA managers

This is a list of CA's supporting European Data Grid.

<http://marianne.in2p3.fr/datagrid/ca/ca-table-ca.html>

There is no central CA, and this sub-group doesn't yet characterize itself as a PMA, but it is one in fact. The member CA's operate in similar fashions, the group maintains a kind of specification document, and is managing a compliance audit process.

### 9.3 US Federal Bridge

## Change History

3/16/2003 2:01:38 PM

Changes to every section, noted by name, including:

01 Feb 2003 changes from mwh to Introduction

01 Feb 2003 (approx) changes from TG to abstract/introduction to meet editorial requirements

28 Feb 2003 changes from Peter Gietz to Introduction, various sections, extensive additions to directory, and extensive suggestion for By-Laws, as well as comments on section 8, the examples

10 Mar 2003 (approx) changes from Bob Cowles mostly to section 3, GPMA membership

[rdc@SLAC.Stanford.EDU](mailto:rdc@SLAC.Stanford.EDU) et al.

16 Mar 2003 editorial changes from mwh, to fix headers again, clean up TOC and fix its style, clean up trashed sections and some weird leftover Word debris, merge changes from all the above authors.

September 24, 2003 added changes from list. Reformatted doc.
